Tour of the app.

- Lets take a look at the code and how it runs.

Challenges

- Challenges included:
 - Working on the adding and updating features.
 - Loading into a separate file
 - Working out tests.

Ethical Issues

- Not really any issues here.

Favourite Parts

- The randomly generated name part in the testing tool.
- Finally finishing and debugging the update feature
- The colour package that I used helped make adding and deleting things more interesting
- Seeing the application actually run! From just an idea to actually working, even if it is only small scale.
